

Sandwich / Trifoil Brazing Strips

for TCT Saw Blades

Sandwich / Trifoil is a composite material with the brazing filler metal on either side of a central copper core. FORTEBRAZE sandwich/trifoil strips are ideal for brazing large carbide pieces of more than 2 mm in any dimensions. Sandwich / Trifoil is designed to artificially thicken a joint, relieving stress and reducing the incidence of cracking. The additions of manganese improves wetting on difficult to wet grades of carbide.

Product Code	Ag	Cu	Zn	Ni	Mn	Melting Range °C
7049TRI	49%	27.5%	20.5%	0.5%	2.5%	680-705

Available Sizes	
Thickness	Min 0.20 mm
Width	2 mm - 80 mm
